COMPLETE INDEX

Pages 158, 159 and 160

We have made large plantings this year but still some varieties are in short supply. It is a wise gardener who orders his seeds early.

David Burpee with the new Tetra Marigold, the first new flower created by the use of a chemical—colchicine. Tetra Marigold is what is known scientifically as a tetraploid.

For over 63 years Burpee has been supplying gardeners everywhere with their seed requirements and each year we strive to render better service. We want your garden, planted with Burpee's Seeds, to be an outstanding success. On our Seed Farms, varieties are selected and reselected, year after year, to give you the best that it is possible to produce.

Thousands and thousands of dollars are spent annually by us in research, experimenting, breeding and testing, so that you may receive seeds of the highest quality and vitality. And yet these seeds, Burpee's Seeds, cost no more than ordinary seeds. A few cents will buy a packet of flower seeds which will not only beautify your home surroundings but provide cut flowers for indoor decoration, and for very little money you can get a handful of seeds which will produce a garden full of vegetables. Where else can you buy so much of quality for so little! If you have not grown vegetables before, you don't know their real flavor. No vegetable can compare in flavor with those gathered in your own garden and cooked with as little delay as possible. What about your lawn? Is it well kept? Does it lend an air of distinction and refinement to your property? Burpee's Grass Seeds, special blends for different purposes, are clean, heavy and of the highest quality.

There are many new varieties of flowers and vegetables in this catalog. A new tomato for which we will pay \$100 for a name is offered on page 97; on the same page we list the new Fordhook Pepper, Bronze Medal Winner in the All-America Selections for 1940. Read about the New David Burpee Zinnias on page 4; Tetra Marigold on page 8—the first new flower created by the use of a chemical; Cream Star Petunia, page 3, Silver Medal, All-America Winner for 1940, and many other marvelous new Burpee introductions for your garden will be found throughout this Book.

For the Best Seeds that Grow, whether it be the good old standbys or entirely new varieties, you can depend upon Burpee. We would greatly appreciate your order. May we hear from you soon?

Faithfully yours,

Burpee's New Dwarf Compact Petunia 2426 Cream Star

Silver Medal Winner, All-America Selections for 1940

Plants have the finest dwarf, bushy habit ever seen in the nana compacta group of petunias. When full grown, they are 12 in. high and 14 in. across, neatly rounded and completely covered with flowers over the sides and top. Perfectly uniform; every plant is of the same size and habit, and all plants produce flowers of the same color and form. Cream Star Petunia, entered in competition with many other new flowers, received the highest rating by the judges of the All-America Selections for 1940. To receive such a high honor, a flower must be good; we can fully recommend it.

Flowers grow 2¼ in. across and are shaped like a five-pointed star; soft, creamy white deepening towards the throat to a bright golden yellow. The entirely distinct color of the flowers, together with the uniform, compact habit of the plants and their profusion of blooms, makes Cream Star Petunia ideally suited for low beds, borders and edgings. Plants come into bloom about 20 weeks after the seed is sown and they will continue to bloom profusely until frost. Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.

Heavenly Blue Scabiosa

Burpee's New Scabiosa 2624 Heavenly Blue

Bronze Medal Winner, All-America Selections for 1940

The first of a new group of annual, large-flowered double scabiosas. Plants are medium tall, coming in between the talls and the dwarfs, their average height being 2 ft. Flowers are round, soft azure-blue, and borne most profusely on long, strong stems well above the foliage. Blooms from midsummer until frost if flowers are not allowed to go to seed. Pretty in beds and borders; highly prized for cutting.

Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.

2878 David Burpee Zinnias

Surpass all other zinnias in size, form, and assortment of colors

David Burpee Zinnias represent the greatest advance in large-flowered zinnias since the introduction of the Dahlia-flowered type twenty-five years ago. The flowers are of a form never before seen in zinnias; they may be likened to a large-flowered chrysanthemum, so attractively curled and quilled are the petals. The petals curl backwards so that only the colorful upper side is exposed and the dull underside is entirely hidden.

The size of the flowers is tremendous, and not only are they extremely broad, but they have a depth which is not found in any of the other large-flowered forms. Flowers measure up to 6 in. across and from 4 to 5 in. in depth, with cutting stems averaging 18 in. in length. The quilled form of the flowers makes them exceptionally good keepers, and they will last in good condition for well over a week in water when cut.

Another outstanding feature of these zinnias is the unusual range of colors, many that have never been seen in zinnias before. Pastel shades predominate, such as apricot,

The men on the Floradale Seed Farms thought so much of this new kind of zinnia that they insisted on naming it for the president of this Company.

He and the zinnias are shown above.

soft cream, chamois, buff, terra-cotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are delightful combinations of exquisite blendings of two and three colors. Some of the colors are shown on the front cover of this catalog.

The plants grow about 3 ft. tall and are different from those of any other zinnia. The seed grows

just as well as any, but the plants in the young stage are a little slow in getting started. Once, however, they get their roots well into the ground, they make a most amazing growth-more vigorous and taller than most zinnias. Some of the plants have leaves which are curiously curled and quilled like the petals of the flowers. The plants with the most extremely curled leaves usually bear the most attractively formed flowers. Those with the plain leaves bear flowers which are not so extremely quilled as the others, but are large and beautiful. The color of the foliage is of a deep, rich green and is somewhat mildew resistant.

These zinnias have a fine pedigree. They are a development out of Luther Burbank's Zinnias, the result of a mutation which occurred several years after Mr. Burbank's death. Their size, shape and wide range of soft delicate pastel colors that you never dreamed could be found in this popular garden flower make them most desirable for garden use and cutting.

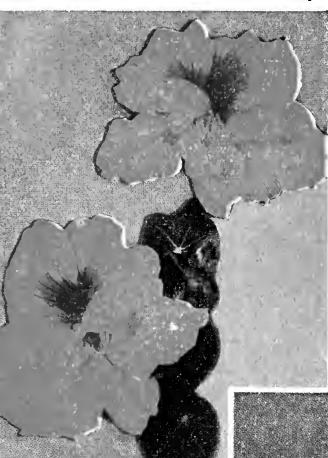

Pkt. (40 seeds) 25¢; 90 seeds 50¢; 200 seeds \$1.00; 1000 seeds \$5.00.

Tetra Marigold (top) in comparison with Guinea Gold (below)

New Giant Marigold 2193 Tetra

Tetra Marigold is the first flower to be produced for cultivation which was developed by doubling the chromosome number through artificial means. This was done by using a drug known as colchicine. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold Marigold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra."

The flowers of Tetra have the same attractive carnation-flowered form as Guinea Gold, but are much larger, $3\frac{1}{2}$ to 4 in. across, and of a very deep orange color. The petals are frilly and possess unusually heavy substance so that the flowers have excellent keeping qualities. Some idea of the size of Tetra in comparison with Guinea Gold may be had by looking at the picture to the left.

Plants grow 2 to 2½ ft. tall and have much greater vigor than other marigolds. The main trunk and branches are very thick and heavy; the leaves are broad and leathery. The flowers are borne profusely over the top of the upright plants. Many of the branches have a cluster of 6 or 8 flowers at the end so that a single branch when picked would make a bouquet. Showy in beds and borders; wonderful for cutting.

Tetra begins blooming in about 19 weeks from seed. If you wish to have a long season of bloom, we suggest that you start seeds early indoors. Tetra is as easy to grow as any marigold; don't miss this distinctly new variety.

4093 Summer Skies Series Very large flowers of clean, pure, pleasing shades of azure blue, light and deep sky blue. Soft and refined. One of the most pleasing.

2271 Burpee's Red and Gold Hybrids

Hybrids Between African and French Marigolds

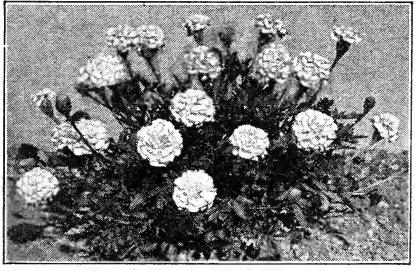

The flowers of Burpee's Red and Gold Hybrids grow $2\frac{1}{2}$ to 3 in. across. Some are solid red with a brilliance never before seen in marigolds; others are delightful combinations of red and gold. The flowers vary in color according to season and even in different flowers on the same plant at the same time. At times they are almost pure golden-yellow and at other times mahogany-scarlet.

Burpee's Red and Gold Hybrids are the liveliest colored and most outstanding of all marigolds. They are extremely double and nearly three times the size of the largest double French Marigold. They are the earliest of all marigolds, as they come into bloom in less than eight weeks from seed. The plants are more profuse blooming and will continue to flower over a longer period of time than any other marigold; in fact, they have flowered continuously for more than seven months in the open garden. Grow 1½ ft. tall, 2 ft. wide. Burpee's Red and Gold Marigolds are hybrids between the African and French Marigolds and for this reason a few African Marigolds of an orange color will appear in any planting. These African Marigolds can be distinguished from the hybrids before the plants are ½ in. high by the green color of their stems; the hybrids have red stems.

Chrysanthemum Flowered

Marigold, Golden West

2308 **Shaggy** This unique marigold takes its name from the distinct "shaggy" appearance of its large, ball-shaped, deep golden yellow flowers, which grow 3 in. or more across. They are borne singly or in clusters of 2 or 3 on the ends of long branches. The strong, vigorous plants have a neat, upright, bushy habit of growth, 24 in. tall and 20 in. wide; begin blooming in 15 weeks and continue profusely until frost.

Pkt. 20¢; ½ oz. 60¢; ¼ oz. \$1.00.

2311 **Orange Delight** An extremely deep orange, the deepest coloring known in African Marigolds. Flowers are round, pompon-like, and are made up of a multitude of attractively curled and interlaced petals. The blooms grow $2\frac{1}{2}$ in. or more across, the first ones appearing in about 20 weeks after seed is sown. Plants grow 3 ft. high. Start seed indoors.

Pkt. 15¢; $\frac{1}{8}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢.

2297 Early Sunshine Bronze Medal Winner, All-America Selections Flowers have the attractive form of Dixie Sunshine, but are considerably larger, growing $2\frac{1}{2}$ in. across and $1\frac{1}{2}$ in. deep, and, best of all, they are extremely early. Blooms are had in 15 weeks from the time the seed is sown, so that even in the most northern states, where summers are short, Early Sunshine will provide great numbers of flowers for many weeks. Plants grow 2 ft. tall and produce their cheerful, bright lemon-yellow flowers most profusely.

Pkt. 15¢; ½ oz. 50¢; ¼ oz. 85¢.

2221 **Dixie Sunshine** Clear, bright yellow, long-stemmed double flowers, about $2\frac{1}{2}$ in. across, composed of small, five-pointed florets that are interlaced in such a manner as to give them the appearance of a pompon chrysanthemum. Pkt. 15¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

Dwarf, bushy plants, 20 in. high. Begin to bloom in 17 weeks from seed; continue profusely until frost. Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds \$1.00.

Marigo ds—continued

A wealth of color in late summer and fall unequalled by any other flower. Easy to grow in ordinary garden loam and a sunny location. Remarkable diversity of habit and size of flowers; each class has its own particular place in the garden. Lovely for cutting, the flowers keeping in fine condition for a long time.

Carnation Flowered

dwarfer growing, and more floriferous than Guinea Gold. Plants start to bloom in 15 weeks after seed is sown. Flowers grow 3½ in. or more across, with petals loosely and gracefully placed. Plants grow 2½ ft. tall, and as they branch freely from near the base, the stems are quite long and borne so profusely that the plants are literally covered with deep orange flowers until killed by frost. Much like Burpee Gold marigold except that Golden West has foliage with the usual marigold odor. Its earliness will be especially appreciated in sections where seasons are short. Long-keeping cut flower. Pkt. 15¢; ½ oz. 35¢; ¼ oz. 60¢.

2294 **Burpee Gold** Earlier blooming, larger flowered, dwarfer growing, with more flowers than Guinea Gold, and, above all, **foliage is entirely free of the usual marigold odor.** Glorious deep orange double blooms. $3\frac{1}{2}$ in. across, with the long petals loosely and artistically arranged. Plants grow $2\frac{1}{2}$ ft. tall, begin blooming in 15 weeks, and continue most freely until frost. Pkt. 15ϕ ; $\frac{1}{8}$ oz. 35ϕ ; $\frac{1}{4}$ oz. 60ϕ .

Thumb, Golden Crown Dwarf or Tom Thumb form of the popular Guinea Gold; plants grow about 10 in. high. Flowers are large, golden orange, and borne abundantly above the lush green, fine-leaved foliage. Especially suited for borders or bedding; nice for cut flowers.

Pkt. 15¢; ½ oz. 35¢; ¼ oz. 60¢.

2180 Guinea Gold Brilliant orange carnation-like flowers flushed with gold. The first marigold of this type to be introduced and still very popular.

Pkt. $10 \not\in$; $\frac{1}{4}$ oz. $30 \not\in$; $\frac{1}{2}$ oz. $50 \not\in$.

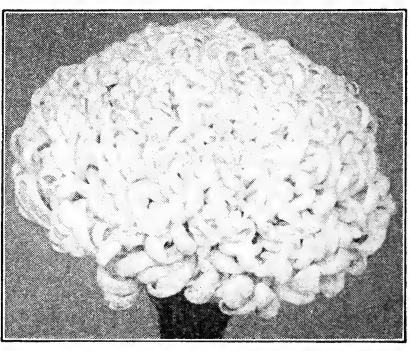

Hedge or Border Marigold

2307 **Spanish Gold** A new and distinct habit of growth in marigolds called "Hedge or Border"—every plant is identical in habit, height, breadth, extremely bushy, with a flat top and straight sides so that a row of these plants gives the appearance of a neatly trimmed hedge, 20 in. high and 30 in. wide. When in full bloom, the entire top and sides of the plants are covered with deep glowing golden orange flowers, which grow 3 in. across and somewhat resemble carnations but differ in that the petals are delightfully ruffled and slightly fluted. Flower stems are long and ideal for cutting. Blooms in 20 weeks from seed and continues to flower profusely until frost. Start seed indoors for earliest blooms.

Pkt. 15¢; ½ oz. 50¢; ¼ oz. 85¢.

Mixed One of the loveliest garden combinations you have ever seen; also lovely mixed as cut flowers. We are sure you will like this mixture.

Calendulas are of easiest culture, succeeding in ordinary well-drained soil. Sow any time during the spring and early summer. 15 to 24 in. tall, depending on the variety.

BURPEE'S EXQUISITE PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in soil that is overly rich.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting. The freedom with which the charming blooms are produced throughout the growing season is truly amazing.

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full

sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of zinnias are easy to grow.

Giants of California

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the Dahlia-flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, wellbranched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders.

3184 Brightness Deep rose. A fine variety which combines well with Golden Queen or Daffodil. Very full and of perfect form.

3183 Cerise Queen Beautiful flowers of a luminous cerise-rose shade. Widely grown.

3185 Daffodil Distinctive shade of bright canary or daffodil yellow. Exceptionally nice.

3190 Enchantress Light rose with a dark rose center. A truly enchanting two-toned color combination which produces a most charming effect.

3192 Golden Queen (Lemon Queen) Delightful shade of lemon-yellow with a distinct golden cast.

3196 Grenadier Rich, glowing dark red. A vivid yet unobtrusive color. Especially fine for exhibition.

3197 Lavender Gem Deep lavender, turning to a warm purple as the flower matures. Very artistic shade.

3191 Miss Willmott Lovely, delicate, yet warm, soft pink, deepening somewhat as flowers age. Pleasing shade.

3187 Orange King Rich cadmium or orange-scarlet flowers of remarkable brilliance, many two-toned.

3186 Purity Most outstanding for its pure white color and perfect finish. Splendid alone; lovely with all colors.

3188 Rose Queen An exquisite flower of pure, clear, rose color. Most desirable. Radiant, soft, and refined.

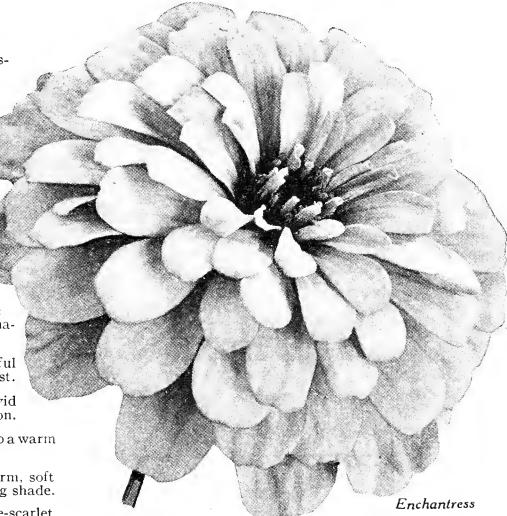

3198 Salmon Queen Salmon-rose flowers of unusual beauty; a particularly attractive zinnia for cutting.

3189 Scarlet Gem A gem in the true sense of the word. Glowing scarlet. Very striking in solid masses.

3199 Violet Queen Marvelous flowers of a wonderful shade of deep purple; beautiful under artificial light.

Any of the above separate varieties: Pkt. 15ϕ ; $\frac{1}{8}$ oz. 30ϕ ; $\frac{1}{4}$ oz. 50ϕ ; $\frac{1}{2}$ oz. 85ϕ .

Plants grow about 2 ft. tall and are very profuse blooming throughout the summer and fall. Fantasy Zinnia, Mixed Colors, and Star Dust (yellow Fantasy) each won an All-America Award of Merit.

Cosmos

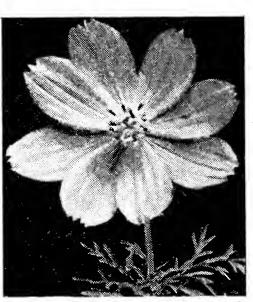

Beautiful summer and fall blooming plants; decorative in the garden and wonderful for cutting. Always popular, but more so now than ever, no doubt due to the introduction of the early midseason type a few years ago, followed by the beautiful yellow cosmos and Maminoth Sensation. Plant as many varieties as space will permit, for a garden is incomplete without this lovely flower. They are old favorites, a constant expression of friendliness, happiness, and memories. One of the easiest to grow.

Sensation (Mammoth Flowering)

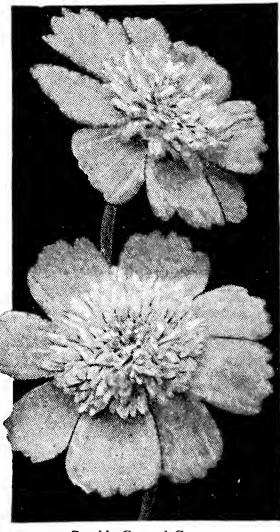

Giant flowers, 4 to 6 in. across, are had within 10 weeks from seed and are borne most profusely until frost on strong, robust plants, 4 to 6 ft. high. Orange Flare—the much wanted early golden orange cosmos

Double Crested Cosmos

Improved Larkspurs

One of the most beautiful and desirable annuals for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better, but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to $1\frac{1}{2}$ ft. apart.

Giant Imperial

Grow Upright Like Delphiniums

Attractive flower spikes, 3 to 4 ft. tall, which stand upright, close to the center stalk—a decided improvement on older types. Wellformed, large, double flowers in a wonderful range of colors.

2142 Glitters (New) Scintillating salmon-cerise; the brightest of all larkspurs. Large, double flowers fill the spikes, the laterals coming into bloom at almost the same time as the main spike, which is quite unusual. Not so tall as others and more showy. Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.

2131 Dazzler Improved (New) Deeper and brighter carmine-red than old Dazzler. Very showy. Pkt. 15¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

2121 Blue Bell Clear azure-blue; lovely and desirable shade.

2166 Dark Blue Spire Intense Oxford-blue; most attractive.

2165 Carmine King Deep carmine-rose; always attracts.

2126 Daintiness Delicate lavender, a soft but rich tone.

2157 White King Extra large, fully double, pure white flowers, closely placed on heavy spikes a little taller than other colors.

BURPEE'S GLORIOUS ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early varieties, we suggest that you have seedlings of later flowering ones or other flowers coming along to take the place of the earlies when they are through blooming.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before your usual outdoor planting time.

* Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."

Dwarf or Globe Plants

The plants of Burpee's Dwarf Double Nasturtiums are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double, sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, edgings, rock gardens and pot culture.

2337 Sun Ball

The new 40- to 60-petaled Super-Double Nasturtium found in Burpee's Double and Super-Double Mixture

2334 Burpee's Double and Super-Double Mixed Nasturtiums

These New Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of this wonderful mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, others will be Super-Double, like the illustration opposite. Burpee's Super-Double Nasturtiums (Tropaeolum majus Burpeeii), when fully open, resemble greenhouse carnations.

Plants are vigorous and produce an abundance of large, sweet-scented flowers, 3 in. across. The Super-Doubles have as many as **40 to 60 true petals**, and the double hybrids have 8 to 10. Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of the Super-Double type. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums.

Burpee's Super-Double is the only Nasturtium to be given a Plant Patent. Plants grown from our Double and Super-Double Mixture seed are protected by U. S. Plant Patent No. 141.

Burpee's Early Flowering Sweet Peas

Varieties are arranged in each color class from deep to light shades

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 64 to 69. They are especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North, and also valuable for winter flowering under glass. They are being planted more and more every year.

If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

The adaptability of perennial flowers for various purposes makes them essential and permanent features of every garden.

Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent free upon request.

Average heights and blooming season are given in the description for each class; some variation is natural in different localities.

Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

Regal Lily (Regale)

Gorgeous, bell-shaped, white blooms with a touch of canary-yellow in the throat and a shading of lilac-pink on the Blooms during July. Sweetscented. One of the most beautiful and easiest grown of all lilies, the individual blooms of which measure about 6 in. in length and $4\frac{1}{2}$ to 5 in across. Plants grow 3 to 5 ft. high.

BURPEE'S DAHLIA ROOTS

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

1118 Burpee's New "Nameless" Tomato

A distinct, new, all-purpose tomato —a new and different type of fruit on a new kind of vine. The plant is short stemmed and bushy, but with no selftopping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which virtually hides the fruit, especially in center of plant. The fruit, unusual in that

it combines large size with deep globular form, averages 7 to $8\frac{1}{2}$ ozs. and maintains its size well throughout the season. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small in other words, it is refined in spite of its size. The color is bright scarlet, uniform, and attractive. Slice Burpee's New "Nameless" Tomato and you will marvel at the structure and firmness of its interior. Flavor? As good as Marglobe, and that's a high compliment. Ready in 75 days from setting out the plants. 100 seeds 10¢; 300 seeds 25%; 1,500 seeds \$1.00.

bined thickness of flesh and desirable shape with earliness, productivity, and adaptability to every part of the country. It most closely resembles California Wonder but is a week or ten days earlier in Southeastern Pennsylvania, and farther north this valuable characteristic is intensified. It is remarkably productive, setting an unbelievably heavy crop of peppers under almost any conditions. Plants are 15 to 18 in. tall, erect, bearing fruits upright in large clusters. The fruit is blocky, just the right

size and shape for stuffing, measuring $3 \text{ to } 3\frac{1}{2}$ in. in diameter and $3\frac{1}{2}$ to 33/4 in. in length. It is nearly round in cross section, with 3 or 4 lobes, a wellrounded blossom end entirely without objectionable deep creases, and is glossy dark green turning bright red when ripe. The flesh is $\frac{3}{16}$ in. thick, tender, crisp, and, of course, always sweet. Ready in 67 days from time of setting out the plants.

316 Sweet Corn—Burpee's Delicious

91 days. Is white corn sweeter than yellow? Since it's a matter of personal taste, we can't say. However, be sure you've compared Burpee's Delicious very carefully with the best of the yellow varieties before you make your conclusions. We think that Delicious tops the white varieties for quality.

Delicious matures in about 91 days from planting. The plant grows 5 to 7 ft. tall and produces an ear 7 to 8 in. long and $1\frac{1}{2}$ to $1\frac{3}{4}$ in. in diameter, filled to the top with 12 or 14 rows of pearly white kernels, closely and evenly set.

A husky, productive, and uniform plant, a most attractive ear, and, above all, the very finest table quality. We recommend Delicious sweet corn to all our customers.

1085 Tomato—Sweetmeat

66 days. An outstanding second early pink tomato which should replace many of the varieties in use at the present time. Fruits are smooth, uniform, semi-globular in shape and average about 5 ozs. in weight. They ripen evenly throughout and are quite free from cracking. Flesh is solid, fine grained and of delicious flavor. Heavy vines give ample protection to the fruit. A Burpee introduction, developed at our Michigan breeding grounds

531 Lettuce—Imperial 44

84 days. While this strain was bred by the late Dr. Ivan C. Jagger, the famous lettuce and cantaloupe breeder of California, the true use of Imperial 44 was discovered by Dr. J. E. Knott of Cornell University. Imperial 44 is a low-growing crisp head with thick, heavily savoyed, dark green leaves. The head is deep, 5 to 6½ in. in diameter, very solid, and weighs 1¼ lbs. under good conditions. Such a sensational and dependable header in the East that the supply of seed last season was far short of the demand for it. A sure header. White seeded. GREEN-POD BUSH BEANS

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before

they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks up to August 10. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft.; 60 lbs. for one acre.

Kentucky Wonder Pole Bean

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 80 days. Sow seed when the weather has warmed up, about the second week of May in vicinity of Philadelphia, and not later than June 15. Set poles 4 ft. apart and place 5 to 8 beans around each pole; one packet of seed is enough for 20 poles; 1 lb. of seed for 100 poles. When plants are well established, thin to 3 or 4 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed.

72 Kentucky Wonder or Old Homestead o

EDIBLE SOY BEAN

35 Bansei

96 days. Since the recent introduction of vegetable type soy beans into this country, the demand for seed has constantly increased. These beans are not only delicious when eaten green or dry, but they are also an excellent source of Vitamins A, B, and G. The food value is very high because of the fat and protein content. The Bansei variety is one of the earliest and most productive of all and very adaptable in its growing requirements; it will produce crops in nearly any section of the country. Plants grow 24 in. high and do not require support. Seeds are bright green while young and yellow when mature. Ask for cooking instructions when ordering seed.

POLE LIMA BEANS

Pole Lima Beans greatly outyield the bush varieties per square foot of garden space. They mature somewhat later. Set the poles 4 ft. apart each way and place 6 to 8 seeds around each pole with the eyes down, covering with 2 in. of fine soil. Later thin to 2 or 3 plants to a pole. Do not plant until the ground is thoroughly warm, about the middle of May in the vicinity of Philadelphia. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row. All Lima Beans prefer a warm, sandy loam soil enriched with well-rotted stable manure; wait until soil is warm and weather settled before planting.

105 Burpee's Best Pole Lima O

92 days. The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook -its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant.

Burpee's Best will climb ten to twelve feet under average conditions, and

produce pods along its entire length in clusters of 4 to 8. The pods are straight, 5 to 6 in. long, $1\frac{1}{2}$ in. broad, and nearly one inch thick. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest it to those who have been growing this older variety.

BUSH LIMA BEANS

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in rows $2\frac{1}{2}$ to 3 ft. apart, and cover 2 in. deep with fine soil. Later thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush, Wood's Prolific, and Jackson Wonder. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. 100 ft.; 60 lbs. to an acre.

65 Burpee's Fordhook Bush Lima O

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook Bush Lima Bean is known and grown wherever beans are planted. It is a Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself, and is altogether unique. Nothing like it has ever been grown. It is a bush type of the popular "Potato" Lima; strong and erect and never prostrate or running. The stalks that produce the blossoms are thrown out from the lateral and main stalks, and the pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to 5½ in. long, 1¼ in. wide, and as much as ¾ in. thick. Each pod usually holds 4 large, plump beans which remain green for a long time.

The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. On our own Seed Farms we grow enormous quantities of this bean which we ship to our customers in every state in the Union. Sales are heavier each year due to the ever-increasing popularity of Fordhook Bush among home gardeners and market growers. For a Pole Lima of the Fordhook type, plant Burpee's Best.

64 McCrea Bush Lima (Miniature Fordhook)

76 days. McCrea Bush is just what we have been waiting for—a Miniature Fordhook. To give an idea of the size of the beans themselves—the Fordhooks listed above are so large

that 22 seeds will weigh one ounce. The McCrea is so small that it takes 70 seeds to weigh one ounce. While the seed itself is small, the plant is nearly as large as Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved, and contain from 3 to 5 plump green beans of true potato type. The unusually delicious flavor of this Miniature Lima and the fact that the beans retain a green tint when cooked have already made it a popular favorite with home and market gardeners. Canners, too, have found it most desirable, for the plump, thin-skinned beans have an unusually sweet flavor, different from any other lima, and they do not break up in the can. As they retain their green color when cooked, they make a nice appearance when served.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢;

2 lbs. 85¢; 5 lbs. \$1.55; 10 lbs. or more @ 29¢ per lb.

68 days. Of special value because it is the largest-seeded bush lima that produces well under dry, hot conditions. Upright plants bear an abundance of pods from 4 to $4\frac{1}{2}$ in. long, each containing 3 or 4 medium-sized beans. The hardiness of this variety, along with its excellent quality, have made this bean popular wherever grown. Pkt. $10 \, \text{¢}$; $\frac{1}{2} \, \text{lb.} \, 25 \, \text{¢}$; lb. $40 \, \text{¢}$; 2 lbs. $75 \, \text{¢}$; 5 lbs. \$1.40; 10 lbs. or more @ $26 \, \text{¢}$ per lb.

Burpee's Philadelphia Bush Lima Beans

Fordhook Bush Lima

63 Burpee's Improved Bush Lima Bean O

Another World Famous Burpee Introduction

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The seeds and pods are larger, and the plants are more productive. Plants of Burpee's Improved are large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are $4\frac{1}{2}$ to $5\frac{1}{2}$ in. long, and 1 to $1\frac{1}{8}$ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality.

Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than

competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either. $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.45; 10 lbs. or more @ 27¢ per lb.

60 Burpee's Bush Lima

78 days. The original dwarf, large-seeded Bush Lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pods grow $4\frac{1}{2}$ to 5 in. long and contain 3 or 4 large beans of excellent quality. Pkt. 10ϕ ; $\frac{1}{2}$ lb. 25ϕ ; lb. 40ϕ ; 2 lbs. 75ϕ ; 5 lbs. \$1.35; 10 lbs. or more @ 25ϕ per lb.

68 days. Improved Henderson Bush or Baby Lima. One of the earliest maturing bush lima beans, so is especially desirable in northern states where growing seasons are short. Pods are small, 3 to $3\frac{1}{2}$ in long, each containing 3 or 4 plump beans of delicious, sweet, buttery lima flavor. Plants are very prolific, and while they begin to bear very early, they will continue to produce until killed by frost.

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, wellmanured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or celery

paper may be used to blanch the stalks. One pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; 4 ozs. for one acre. Days to maturity are from field setting of plants.

Treat seed with Cuprocide or Semesan.

272 Burpee's Fordhook O

The Finest Flavored Celery

130 days. Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a tender full heart in the center. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of the variety. Of course, the time is average and some variation is to be expected, depending on the season and locality.

WATERMELONS

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart. Place 6 to 8 seeds in a circle in each hill, and cover 1/2 in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 12 hills; 1 oz. 25 hills; 3 to 4 lbs. for one acre. In northern states, plant Burpee's Fordhook, Cole's, or Early Northern Sweet.

ONIONS

The soil best suited to grow a good crop of onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked; space rows 1 to 1½ ft. apart. Cover the seed lightly, and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One pkt. of seed will sow about 50 ft. of row; 1 oz. 200 ft.; 4 to 5 lbs. one acre. Japanese Bunching and White Welsh, which are used as green onions or scallions, are best planted in July for harvest the following spring.

PEPPERS

Pepper seed should be sown in a hotbed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. One pkt. of seed will produce about 100 plants; 1 oz., 1500 plants; 4 to 6 ozs. will produce enough plants for one acre. Days to maturity are from field setting of plants. Treat seed with Cuprocide or Semesan to prevent damping off.

RADISHES

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering $\frac{1}{2}$ in. deep. Thin plants to stand 1 to $\frac{1}{2}$ in. apart in the row. Make succession plantings every week until early summer, then resume one month before frost. This applies to **spring** and **summer** radishes; seed of **winter radishes** is not sown until June. One pkt. will sow about 20 it. of row; 1 oz. 100 ft.; 10 to 12 lbs. for one acre.

SPRING VARIETIES

910 Burpee's Red Giant O

29 days. This remarkable radish combines large size with tender crispness and mild flavor as no other variety does. The roots, even though they grow to the enormous size of 1½ in. in diameter, are as crisp as ice if grown quickly. The skin is bright scarlet-red. The flesh is pure white and has a most delicious flavor. It grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when ½ in. in diameter; pick it ten days later when the roots measure 1½ in. or more—it's always crisp, sweet and tender. Pkt. 10¢; oz. 20¢; 4 ozs. 50¢; ½ lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00.

29 days. Sweet, crisp, juicy, brittle, and a wonderful yielder. A fine large, bright red radish. This radish differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a large globe, 2 in. in depth, 1½ in. in diameter, with thin, tender skin of deep crimson, and solid white flesh. It is a very popular variety, of large size and the finest quality. Early, notwithstanding its size. Sow seed thinly to permit full development of the roots, and for the largest radishes see that the soil is fertile and deeply prepared. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 50¢; lb. 85¢; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35.

SPINACH

Spinach is a cool weather crop and may be sown very early in the spring. It is not injured by spring freezes. Sow in rows 18 to 24 in. apart, cover seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the row. Make successive sowings until early summer and plant again early in the fall. Plantings made in September will survive through the winter as far north as Pennsylvania and will give cuttings two weeks earlier than spring sown crops. One pkt. will sow about 25 ft. of row; 1 oz. 100 ft.; 10 to 12 lbs. one acre in rows; 20 lbs. one acre broadcast.

TOMATOES

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow in rows 3 in. apart and cover with 1/4 in. of soil. When plants are about 2 in. tall, transplant to stand

4 in. apart in the row or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. One pkt. will produce about 300 plants; 1 oz. 2000 plants; 2 ozs. will produce enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocide to prevent disease.
